FOR IMMEDIATE RELEASE:

Tyco Security Products Releases Latest Version of VisonicGO Mobile Application

The smartphone and tablet ready app allows users to receive visual verification of events in real time

HEATHROW, UK. 21 July, 2016 — Tyco Security Products introduces the latest version of its VisonicGO mobile application, which puts event-related security decision-making, including images of proceedings as they unfold, into customers' hands via an Android or iOS smartphone or tablet. The app can be used for self-monitoring as well as to complement monitoring services.

Through the use of cloud-based servers, residential and commercial users with PowerMaster control panels can connect to the VisonicGO app and perform key security system functions, including remotely arming and disarming systems, managing event history remotely, and receiving information on and responding to device status, such as a door or window left open. Users can customize their event notifications as well, so they only receive the information they want without getting overloaded with data.

VisonicGo offers the ability to get images and text or sound notification based on alarms in real time. With visual verification available on demand, users can make decisions based on what is occurring, just as if they were on the scene. Archived images can be forwarded to law enforcement officials for identification of suspects or sent to insurance companies for documentation of incidents. The event images and alarm information can also be shared with the user and the monitoring company at the same time, providing peace of mind and vital facts during an active event and eliminating unnecessary expenses for false alarms.

"One of the top demands installers are hearing from customers these days is the ability to monitor events remotely, so they can be where the action is even when they are away from their home or business," said Aitor Gauna, EMEA Product Marketing Manager, Intrusion, Tyco Security Products. "The VisonicGo app puts information into the hands of the end user, whether it's a homeowner who wants to monitor his residence via his phone while on vacation or a business customer who wants to oversee and respond to events at any time."

The VisonicGO app is available through the App Store and Google Play and is usable in 15 languages. For more information on VisonicGO, visit www.visonic.com.
