Quick Start Guide

DL-125C, DL-125CA

Programmable 2-channel Speech Dialer

1. PROGRAMMING REGULAR PHONE NUMBERS

The dialer can call up to 4 regular phone numbers per zone. To program the numbers to be called when zone 1 (Z1) is in alarm:

- Press [PROG] [1] [#] - this selects location 1.
- After the dial LED flashes twice, enter phone number to dial.
- Finish by pressing [#].

> **Example:**
> [PROG] [1] [#] [5] [5] [5] [1] [2] [1] [2] [#] - *this would dial phone number **555-1212** and deliver the message programmed for zone 1*.

Program the remaining phone numbers (**2, 3** and **4**) as above. For example:

- Press [PROG] [2] [#] - this selects location 2.
- After the dial LED flashes twice, enter phone number to dial.
- Finish by pressing [#].

Program numbers for **zone 2 (Z2)** in the same manner, except that the location numbers will be 5, 6, 7, & 8. Start with pressing [PROG] [5] [#] - this selects location 5.

2. PROGRAMMING NUMERIC PAGERS

Pagers require two phone number locations. Therefore, each DL-125C / DL-125CA zone can call a maximum of two pagers. Proceed as follows to program pagers into zone 1:

- Press [PROG] [1] [#] - this selects location 1.
- After the dial LED flashes twice, enter the phone number of the numeric pager.
- Press [★] [4] - this links the current location with the next for pager function.
- Press [#].
- Press [PROG] [2] [#] - this selects location 2.
- After the dial led flashes twice, press [★] [4] - this links this location to the previous location for pager function.

- Press [1] [0] to provide a 10-second delay allowing the paging company to pick up (you can enter any two digit value, but 10 seconds works in most cases).
- Enter the number you wish to appear on the pager's display and finish by pressing [#].

> **Example:**
> [PROG] [1] [#] [5] [5] [5] [2] [5] [2] [5] [★] [4] [#] *and then:*
> [PROG] [2] [#] [★] [4] [1] [0] [9] [9] [9] [9] [#] - *this would deliver the message "9999" to a pager at phone No. 555-2525.*

If you wish to program another pager in zone 1, follow these same steps, but use locations 3 and 4. To program pagers into zone 2, use locations 5 & 6 and/or locations 7 & 8.

3. RECORDING VOICE MESSAGES

The DL-125C / DL-125CA contains three locations for voice messages. The total recording time cannot exceed 19 seconds.

Location / common message (up to 14.5 sec.) **-** name and address that is common to AL-1 and AL-2 messages.

Message AL-1 (up to 2.5 sec.) is the alarm type message for zone 1 (burglar alarm activation, for example).

Message AL-2 (up to 2 sec.) is the alarm type message for zone 2 (low temperature detection, for example).

You must record <u>at least</u> the common message and one of the alarm messages (AL-1 or AL-2). You cannot record only a common message. Recording should be done in the following order:

To record AL-1 & AL-2 (location message):

- Press [#]
- Press and hold both [AL-1] and [AL-2] buttons at the same time while reading the message aloud - red LED will be on.

- Release [AL-1] and [AL-2] and press [#] - red LED will turn off.

To record AL-1 message:

- Press [#]
- Press and hold [AL-1] while reading the message aloud - red LED will be on.
- Release [AL-1] and press [#] - red LED will turn off.

To record AL-2 message:

- Press [#]
- Press and hold [AL-2] while reading the message aloud - red LED will be on.
- Release [AL-2] and press [#] - red LED will turn off.

For more advanced applications, refer to the DL-125C installation instructions, or contact the technical support.
