## Kosher Certification

We hereby certify that we tested the alarm systems

### Power Master G2 10/30

And the accompanying wireless sensors

And found that the systems can be used on Shabbat and Jewish Holidays

With Accordance to the following explanation and operating conditions

Wishing you peaceful and safe Shabbat

Rabbi Yisrael Rozen Eng.

Dean of the Zomet Institute

צומת -  
צוותי מדע ותורה

### A. Explanation

1. When the system is deactivated the motion sensors and 'curtain' sensors are turned off altogether.
2. The magnetic door sensor has to be a NC and the magnet is not adjacent but rather closes an external contact (Model E302), deactivated by a parallel switch, and only then can open it.
3. You may change the switch state and disable the magnetic sensor on Shabbat when the door is closed.

### B. Activation Possibilities on Shabbat

- 1. The first option** - Deactivate alarm system for the whole Shabbat:  
The whole system can be deactivated before Shabbat through the control system, you will also need to shift the Shabbat switch for the door sensor (if one exits, working as an independent unit).
- 2. Second option** - Activating the alarm on Shabbat during pre-planned hours:  
You can activate the alarm system during pre-planned hours (e.g. at night) with time Shabbat clock timer.  
Shift the Shabbat switch to deactivate the door sensor even on the Shabbat when the door is closed.
- 3. A third option** - the system is activated all of the Shabbat, including leaving the house:  
Installing 'Curtain' sensors only (not motion sensors) and avoiding opening windows.  
Install switches for activating and deactivating the magnetic sensor on both sides of the door, allowing leaving the house without violating the Shabbat, and return to door sensor to active status from the outside, without violating the Shabbat, according to the chart on the attached official page of the Zomet Institute.
